

Weekly Report

10/12/2015-10/18/2015

Research

This week, I spend several days to implement the scan line algorithm with OpenGL and I have finished reviewing the paper of pvis2016:A Model-driven Visualization System Based on DVDL.

Also, I start learning spmjs, which is a new static package manager for browser. We can download and manager packages we need in our project by spmjs. In this test project, we add two modules(moment and util.format) to deal with time.
